

# Package ‘ndexr’

October 14, 2021

**Type** Package

**Title** NDEx R client library

**Version** 1.14.1

**Date** 2018-04-27

**Author**

Florian Auer <florian.auer@informatik.uni-augsburg.de>, Frank Kramer <frank.kramer@informatik.uni-augsburg.de>, Ter Pratt <depratt@ucsc.edu>

**Maintainer** Florian Auer <florian.auer@informatik.uni-augsburg.de>

**Description** This package offers an interface to NDEx servers, e.g. the public server at <http://ndexbio.org/>. It can retrieve and save networks via the API. Networks are offered as RCX object and as igraph representation.

**License** BSD

**Depends** igraph

**Imports** httr, jsonlite, plyr, tidyr

**RoxygenNote** 7.1.1

**Encoding** UTF-8

**biocViews** Pathways, DataImport, Network

**Suggests** BiocStyle, testthat, knitr, rmarkdown

**VignetteBuilder** knitr

**URL** <https://github.com/frankkramer-lab/ndexr>

**BugReports** <https://github.com/frankkramer-lab/ndexr/issues>

**git\_url** <https://git.bioconductor.org/packages/ndexr>

**git\_branch** RELEASE\_3\_13

**git\_last\_commit** 57dc82e

**git\_last\_commit\_date** 2021-07-27

**Date/Publication** 2021-10-14

ndexr-package	<i>NDEx R client library</i>
---------------	------------------------------

---

## Description

The ndexr package offers an interface to NDEx servers, e.g. the public server at <http://ndexbio.org/>. It can retrieve and save networks via the API. Networks are offered as RCX object and as igraph representation.

## Details

Package: ndexr  
 Type: Package  
 Version: 2.0.7  
 Date: 2016-12-02  
 License: TBD

## Author(s)

Frank Kramer <[frank.kramer@informatik.uni-augsburg.de](mailto:frank.kramer@informatik.uni-augsburg.de)>  
 Florian Auer <[florian.auer@informatik.uni-augsburg.de](mailto:florian.auer@informatik.uni-augsburg.de)>  
 Alex Ishkin <[aleksandr.ishkin@thomsonreuters.com](mailto:aleksandr.ishkin@thomsonreuters.com)>  
 Dexter Pratt <[depratt@ucsc.edu](mailto:depratt@ucsc.edu)>

## Examples

```
## Not run:
require(ndexr)
###connect anonymously
ndexcon1 = ndex_connect(verbose=T)
###get network api
apidata1 = ndex_get_network.api(ndexcon1)
###find some networks containing p53
pws1 = ndexr::ndex_find_networks(ndexcon1,"p53")
###get complete network as RCX
```

```
rcx1 = ndex.get.complete.network(ndexcon1,pws1[1,"externalId"])
###convert to rcxgraph and back
rcxgraph1 = rcx_toRCXgraph(rcx1)
plot(rcxgraph1, vertex.label=V(rcxgraph1)$n, edge.label=E(rcxgraph1)$i)

## End(Not run)
```

---

ndex_config	<i>NDEx server api configuration</i>
-------------	--------------------------------------

---

### Description

This nested list contains the url and methods for accessing the NDEx server via its REST full api. It contains specifications for NDEx server api version 1.3 and 2.0. The default api is specified by 'defaultVersion'. If possible, the version 2.0 should be used. Own configurations must contain a 'version' entry!

### Usage

```
ndex_config
```

### Format

An object of class list of length 4.

### Value

Nested list resembling the NDEx server REST API structure

### Examples

```
names(ndex_config$Version_2.0)
```

---

ndex_connect	<i>Connect to NDEx REST API</i>
--------------	---------------------------------

---

### Description

This function creates an NDExConnection which stores options and authentication details. It is a parameter required for most of the other ndexr functions. If username and password are missing an anonymous connection is created, which already offers most of the retrieval functionality.

**Usage**

```

ndex_connect(
  username,
  password,
  host = ndexConf$connection$host,
  apiPath = ndexConf$connection$api,
  ndexConf = ndex_config,
  verbose = FALSE
)

```

**Arguments**

username	character (optional); username
password	character (optional); password
host	character (default: ndexConf\$connection\$host); Host address of NDEx server; By default the url set in ndexConf\$defaults\$connection\$host is used. ("http://www.ndexbio.org")
apiPath	character (default: ndexConf\$connection\$api); URL path of the REST api; By default the url set in ndexConf\$defaults\$connection\$api is used. ("/v2" for NDEx version 2.0, "/rest" for NDEx version 1.3)
ndexConf	config object (nested list, default: ndex_config); Configuration of NDEx REST server; Set in ndex_config (set in ndex_api_config.r or ndex_api_config.yml): It contains specifications for NDEx server api version 1.3 and 2.0. The default api is specified by 'defaultVersion'
verbose	logical (optional); whether to print out extended feedback

**Value**

returns object of class NDExConnection which stores options, authentication and api configuration if successful, NULL otherwise

**See Also**

[ndex\\_config](#)

**Examples**

```

## log in anonymously
ndexcon = ndex_connect()
## same as above with extended feedback
ndexcon = ndex_connect(verbose=TRUE)
## Not run:
## log in with credentials
ndexcon = ndex_connect('user', 'password')
## running some NDEx server locally
ndexcon = ndex_connect(host='localhost:8765')
## manually change the api and connection configuration
ndexcon = ndex_connect(ndexConf=ndex_config$Version_2.0)

## End(Not run)

```

---

ndex\_create\_group      *Create Group*

---

### Description

Create a group owned by the authenticated user based on the supplied group JSON object.

### Usage

```
ndex_create_group(ndexcon, groupName, image, website, description, properties)
```

### Arguments

ndexcon	object of class NDExConnection linkndex_connect
groupName	character; name of the new group
image	character (optional); URL of the account owner's image
website	character (optional); URL of the account owner's web site
description	character (optional); Short description of this user
properties	list (optional); additional properties for the group

### Value

url (including the UUID) of the newly created group

### REST query

POST: ndex\_config\$api\$group\$create

### Note

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

### Examples

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
# groupURL = ndex_create_group(ndexcon, 'SomeGroupName')
## [1] "http://public.ndexbio.org/v2/group/aaaaaaaa-bbbb-cccc-dddd-eeeeeeeeeeee"
# groupURL = ndex_create_group(ndexcon, 'SomeGroupName',
#                               image='http://bit.ly/1M3NoQZ',
#                               website='www.gidf.com',
#                               description='A very special group..')
NULL
```

---

ndex\_create\_network     *Create a Network at a server from RCX data*

---

### Description

This method creates a new network on the NDEx server from the given RCX object

### Usage

```
ndex_create_network(ndexcon, rcx)
```

### Arguments

ndexcon	object of class NDExConnection linkndex_connect
rcx	RCX object

### Value

UUID of the newly created network

### REST query

POST (multipart/form-data): ndex\_config\$api\$network\$create\$url data: CXNetworkStream = data

### Note

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 1.3 and 2.0

### Examples

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find a network and get its UUID
# networks = ndex_find_networks(ndexcon, "p53", "nci-pid")
# networkId = networks[1,"externalId"]
## Get the network data
# rcx = ndex_get_network(ndexcon, networkId)
## Do some changes to rcx..
## and create a new network
# networkId = ndex_create_network(ndexcon, rcx)
NULL
```

---

ndex\_create\_user      *Create a user*

---

### Description

Create a new user based on a JSON object specifying username, password, and emailAddress. Username and emailAddress must be unique in the database. If email verification is turned on on the server, this call returns code 220 (Accepted), the location field in the header has the URL to check the status of the newly created user account. If email verification is turned on off on the server, this function returns 201 (Created). The URL for getting the newly created user is in the response body and the Location header.

### Usage

```
ndex_create_user(
    ndexcon,
    userName,
    password,
    emailAddress,
    isIndividual = TRUE,
    displayName,
    firstName,
    lastName,
    image,
    website,
    description,
    verbose = FALSE
)
```

### Arguments

ndexcon	object of class NDExConnection linkndex_connect
userName	character; name of the new user
password	character; password for the new user
emailAddress	character (optional); email address (used for verification if enabled)
isIndividual	boolean (default: TRUE); True if this account is for an individual user. False means this account is for an organization or a project etc.
displayName	character (optional); Display name of this account, only applied to non-individual accounts.
firstName	character (optional); Account owner's first name, only applies to individual accounts.
lastName	character (optional); Account owner's last name, only applies to individual accounts.
image	character (optional); URL of the account owner's image.

website	character (optional); URL of the account owner's web site
description	character (optional); Short description of this user.
verbose	logical (optional); whether to print out extended feedback

**Value**

UUID of the newly created user if email verification is turned off, else an empty string ("")

**REST query**

GET: ndex\_config\$api\$user\$create

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Create a new user
# userId = ndex_create_user(ndexcon, 'SomeUserName', 'SecretPassword', 'SomeUserName@ndex.org')
## [1] "uuuuuuuu-ssss-eeee-rrrr-123456789abc"
# userId = ndex_create_user(ndexcon, 'ASpecialProject', 'SecretPassword',
#                           'ASpecialProject@ndex.org', isIndividual=TRUE,
#                           displayName='Area51', firstName='John', lastName='Doe',
#                           website='www.gidf.com', description='Nothing to see here..')
NULL
```

---

ndex_delete_group	<i>Delete Group</i>
-------------------	---------------------

---

**Description**

Delete the group specified by groupId

**Usage**

```
ndex_delete_group(ndexcon, groupId)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
groupId	character; unique ID (UUID) of the group

**Value**

NULL if successfull, else an error is thrown

**REST query**

DELETE: ndex\_config\$api\$group\$delete

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find user and get its id
# user = ndex_find_user_byName(ndexcon, 'MyAccountName')
# userId = user$externalId
## Find the user's groups and get one group id
# groups = ndex_user_list_groups(ndexcon, userId)
# groupId = groups[1,"externalId"]
#ndex_delete_group(ndexcon,groupId)
NULL
```

---

ndex\_delete\_network    *Delete a network*

---

**Description**

Delete a network

**Usage**

```
ndex_delete_network(ndexcon, networkId)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
networkId	unique ID of the network

**Value**

NULL on success; Error else

**REST query**

DELETE: ndex\_config\$api\$network\$delete

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 1.3 and 2.0

**Examples**

```
## Establish a server connections with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find a network and get its UUID
# networks = ndex_find_networks(ndexcon,"p53", "nci-pid")
# networkId = networks[1,"externalId"]
## Delete the network
# ndex_delete_network(ndexcon, networkId)
NULL
```

---

ndex_delete_user	<i>Delete User</i>
------------------	--------------------

---

**Description**

Deletes the authenticated user, removing any other objects in the database that depend on the user

**Usage**

```
ndex_delete_user(ndexcon, userId)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
userId	character; unique ID (UUID) of the user

**Value**

NULL if successfull, else an error is thrown

**REST query**

GET: ndex\_config\$api\$user\$delete

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

**Examples**

```

## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find user and get its id
# user = ndex_find_user_byName(ndexcon, 'SomeUserName')
# userId = user$externalId
## Delete user
# ndex_delete_user(ndexcon, userId)
NULL

```

---

ndex_find_groups	<i>Search groups in NDEx</i>
------------------	------------------------------

---

**Description**

Returns a SearchResult object which contains an array of Group objects

**Usage**

```
ndex_find_groups(ndexcon, searchString = "", start, size)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
searchString	string by which to search
start	integer (optional); specifies that the result is the nth page of the requested data. The default value is 0
size	integer (optional); specifies the number of data items in each page. The default value is 100

**Value**

Data frame with group information; NULL if no groups are found.

**REST query**

GET: ndex\_config\$api\$search\$user

**Note**

Compatible to NDEx server version 1.3 and 2.0  
 Search strings may be structured

**Examples**

```

## Establish a server connection
ndexcon = ndex_connect()
## Find a group
groups = ndex_find_groups(ndexcon, "Ideker Lab")
names(groups)
## [1] "properties" "groupName" "image" "website" "description"
## [6] "externalId" "isDeleted" "modificationTime" "creationTime"

```

---

ndex\_find\_networks      *Search networks in NDEx (by description)*

---

**Description**

This functions searches the public networks on an NDEx server for networks containing the supplied search string. This search can be limited to certain accounts as well as in length.

**Usage**

```
ndex_find_networks(ndexcon, searchString = "", accountName, start, size)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
searchString	string by which to search
accountName	string (optional); constrain search to networks administered by this account
start	integer (optional); specifies that the result is the nth page of the requested data. The default value is 0
size	integer (optional); specifies the number of data items in each page. The default value is 100

**Value**

Data frame with network information: ID, name, whether it is public, edge and node count; source and format of network. NULL if no networks are found.

**REST query**

```
GET: ndex_config$api$search$network$search
```

**Note**

Compatible to NDEx server version 1.3 and 2.0  
 Search strings may be structured

**Examples**

```
ndexcon = ndex_connect()
networks = ndex_find_networks(ndexcon,"p53")
```

---

ndex_find_users	<i>Search user in NDEx</i>
-----------------	----------------------------

---

**Description**

Returns a SearchResult object which contains an array of User objects

**Usage**

```
ndex_find_users(ndexcon, searchString = "", start, size)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
searchString	string by which to search
start	integer (optional); specifies that the result is the nth page of the requested data. The default value is 0
size	integer (optional); specifies the number of data items in each page. The default value is 100

**Value**

Data frame with user information; NULL if no user are found.

**REST query**

GET: ndex\_config\$api\$search\$user

**Note**

Compatible to NDEx server version 1.3 and 2.0

Search strings may be structured

**Examples**

```
## Establish a server connection
ndexcon = ndex_connect()
## Find a user
users = ndex_find_users(ndexcon,"ndextutorials")
names(users)
## [1] "properties"      "displayName"      "isIndividual"     "userName"         "password"
## [6] "isVerified"      "firstName"         "lastName"         "diskQuota"        "diskUsed"
##[11] "emailAddress"    "image"             "website"          "description"      "externalId"
##[16] "isDeleted"       "modificationTime" "creationTime"
```

---

ndex\_find\_user\_byId    *Get User By UUID*

---

**Description**

Get User By UUID

**Usage**

```
ndex_find_user_byId(ndexcon, userId)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
userId	character; unique ID (UUID) of the user

**Value**

list of properties describing the user (externalId, emailAddress, website, etc.). Throws error (404) if user isn't found!

**REST query**

GET: ndex\_config\$api\$user\$get\$byId

**Note**

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection
ndexcon = ndex_connect()
## Find user by name
user = ndex_find_user_byName(ndexcon, 'ndextutorials')
## Find user by Id
user = ndex_find_user_byId(ndexcon, user$externalId)
```

---

ndex\_find\_user\_byName *Get User By Name*

---

**Description**

Get User By Name

**Usage**

```
ndex_find_user_byName(ndexcon, name)
```

**Arguments**

ndexcon	object of class NDEXConnection linkndex_connect
name	name of the user

**Value**

list of properties describing the user (externalId, emailAddress, website, etc.). Throws error (404) if user isn't found!

**REST query**

```
GET: ndex_config$api$user$get$byName
```

**Note**

Compatible to NDEX server version 2.0

**Examples**

```
## Establish a server connection
ndexcon = ndex_connect()
## Find user by name
user = ndex_find_user_byName(ndexcon, 'ndextutorials')
```

---

ndex\_get\_group *Get a Group*

---

**Description**

Get a Group

**Usage**

```
ndex_get_group(ndexcon, groupId)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
groupId	character; unique ID (UUID) of the group

**Value**

list of properties describing the group (externalId, emailAddress, website, etc.). Throws error (404) if group isn't found!

**REST query**

GET: ndex\_config\$api\$group\$get

**Note**

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection
ndexcon = ndex_connect()
## Find a group
groups = ndex_find_groups(ndexcon, "Ideker Lab")
groupId = groups[1, "externalId"]
## Get group information
group = ndex_get_group(ndexcon, groupId)
```

---

ndex_get_network	<i>Get complete network</i>
------------------	-----------------------------

---

**Description**

Returns the specified network as CX. This is performed as a monolithic operation, so it is typically advisable for applications to first use the getNetworkSummary method to check the node and edge counts for a network before retrieving the network. Uses getEdges (this procedure will return complete network with all elements) Nodes use primary ID of the base term ('represents' element) Edges use primary ID of the base term ('predicate', or 'p' element) Mapping table for the nodes is retrieved ('alias' and 'related' terms) to facilitate conversions/data mapping

**Usage**

```
ndex_get_network(ndexcon, networkId)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
networkId	unique ID of the network

**Value**

RCX object

**REST query**

GET: ndex\_config\$api\$network\$get

**Note**

Compatible to NDEx server version 1.3 and 2.0

**Examples**

```
## Establish a server connection
ndexcon = ndex_connect()
## Find a network and get its UUID
networks = ndex_find_networks(ndexcon,"p53", "nci-pid")
networkId = networks[1,"externalId"]
## Get the network data
rcx = ndex_get_network(ndexcon, networkId)
```

---

ndex\_group\_delete\_membership

*Remove a Group Member*

---

**Description**

Removes the member from the group

**Usage**

```
ndex_group_delete_membership(ndexcon, groupId, userId)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
groupId	character; unique ID (UUID) of the group
userId	character; unique ID (UUID) of the user

**Value**

Empty string ("") on success, else error

**REST query**

DELETE: ndex\_config\$api\$user\$membership\$delete

**Note**

Requires an authorized user! (ndex\_connect with credentials)  
Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find user and get own id
# user = ndex_find_user_byName(ndexcon, 'MyAccountName')
# userId = user$externalId
## Find own groups and get one group id
# groups = ndex_user_list_groups(ndexcon, userId)
# groupId = groups[1,"externalId"]
## Find an other user of the group and get the id
# users = ndex_group_list_users(ndexcon, groupId)
## Choose one user
# userId = users[1,"externalId"]
## Remove user from the group
# ndex_group_delete_membership(ndexcon, groupId, userId)
NULL
```

---

ndex\_group\_list\_networks

*Get Network Permissions of a Group*

---

**Description**

Get Network Permissions of a Group

**Usage**

```
ndex_group_list_networks(
  ndexcon,
  groupId,
  permission = NULL,
  start = NULL,
  size = NULL
)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
groupId	character; unique ID (UUID) of the group
permission	character (optional) ("WRITE" "READ") (default: "READ"); constrains the type of the returned permission.
start	integer (optional); specifies that the result is the nth page of the requested data.
size	integer (optional); specifies the number of data items in each page.

**Value**

List of network permissions of that group or empty object

**REST query**

GET: ndex\_config\$api\$group\$network\$list

**Note**

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection
ndexcon = ndex_connect()
## Find a group
groups = ndex_find_groups(ndexcon, "Ideker Lab")
groupId = groups[1, "externalId"]
## List networks of the group
networks = ndex_group_list_networks(ndexcon, groupId)
networks = ndex_group_list_networks(ndexcon, groupId, permission='READ', start=0, size=10)
```

---

ndex\_group\_list\_users *Get Members of a Group*

---

**Description**

Get Members of a Group

**Usage**

```
ndex_group_list_users(ndexcon, groupId, type = NULL, start = NULL, size = NULL)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
groupId	character; unique ID (UUID) of the group
type	character (optional); constrains the type of the returned membership. If not set (or NULL), all permission types will be returned.
start	integer (optional); specifies that the result is the nth page of the requested data.
size	integer (optional); specifies the number of data items in each page.

**Value**

List of permissions of that group or empty object

**REST query**

GET: ndex\_config\$api\$group\$membership\$get

**Note**

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection
ndexcon = ndex_connect()
## Find a group
groups = ndex_find_groups(ndexcon,"Ideker Lab")
groupId = groups[1,"externalId"]
## Find other users of the group
# users = ndex_group_list_users(ndexcon, groupId)
# users = ndex_group_list_users (ndexcon, groupId, type='ADMIN', start=0, size=10)
```

---

ndex\_group\_network\_get\_permission

*Get Group Permission for a Specific Network*

---

**Description**

Get Group Permission for a Specific Network

**Usage**

ndex\_group\_network\_get\_permission(ndexcon, groupId, networkId)

**Arguments**

ndexcon	object of class NDExConnection <a href="#">ndex_connect</a>
groupId	character; unique ID (UUID) of the group
networkId	character; unique ID (UUID) of the network

**Value**

Network permissions of that group or empty object

**REST query**

GET: ndex\_config\$api\$group\$network\$get

**Note**

Compatible to NDEx server version 2.0

**Examples**

```

## Establish a server connection
ndexcon = ndex_connect()
## Find a group
groups = ndex_find_groups(ndexcon, "Ideker Lab")
groupId = groups[1, "externalId"]
## List networks of the group
networks = ndex_group_list_networks(ndexcon, groupId)
networkId = names(networks)[1]
## Get group's permission to the network
#group = ndex_group_network_get_permission(ndexcon, groupId, networkId)

```

---

ndex\_group\_set\_membership

*Add or Update a Group Member*

---

**Description**

Updates the membership corresponding to the GroupMembership type specified in the URL parameter.

**Usage**

```
ndex_group_set_membership(ndexcon, groupId, userId, type = "MEMBER")
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
groupId	character; unique ID (UUID) of the group
userId	character; unique ID (UUID) of the user
type	character (optional)("GROUPADMIN" "MEMBER")(default: "MEMBER"); Type of group membership

**Value**

Empty string ("") on success, else error

**REST query**

PUT: ndex\_config\$api\$user\$membership\$update

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

**Examples**

```

## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find user and get own id
# user = ndex_find_user_byName(ndexcon, 'MyAccountName')
# userId = user$externalId
## Find own groups and get one group id
# groups = ndex_user_list_groups(ndexcon, userId)
# groupId = groups[1,"externalId"]
## Find an other user and get the id
# user = ndex_find_user_byName(ndexcon, 'SomeOtherAccountName')
# userId = user$externalId
## Add other user to the group
# ndex_group_set_membership(ndexcon, groupId, userId)
## Update other user's group permission
# ndex_group_set_membership(ndexcon, groupId, userId, type='MEMBER') ## same as before
## Make other user to group admin (lose own admin permission)
# ndex_group_set_membership(ndexcon, groupId, userId, type='GROUPADMIN')
NULL

```

---

ndex\_network\_aspect\_get\_metadata

*Get the Metadata Associated with a Network UUID*

---

**Description**

This function retrieves the metadata associated with the supplied network UUID.

**Usage**

```
ndex_network_aspect_get_metadata(ndexcon, networkId, aspect)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
networkId	character; unique ID (UUID) of the network
aspect	character; aspect name

**Value**

metadata for an aspect as list: consistencyGroup, elementCount, lastUpdate, data, name, properties, version and idCounter

**REST query**

GET: ndex\_config\$api\$network\$aspect\$getMetaByDataByName

**Note**

Compatible to NDEx server version 2.0

Server error (version 2.0) since March 13th 2017

**Examples**

```
## Establish a server connection
ndexcon = ndex_connect()
## Find a network and get its UUID
networks = ndex_find_networks(ndexcon,"p53", "nci-pid")
networkId = networks[1,"externalId"]
## Get the meta-data of an aspect of a network
ndex_network_aspect_get_metadata(ndexcon, networkId, 'nodeAttributes')
```

---

ndex\_network\_delete\_permission

*Delete Network Permission*

---

**Description**

Removes any permission for the network for the user or group specified

**Usage**

```
ndex_network_delete_permission(ndexcon, networkId, user = NULL, group = NULL)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
networkId	unique ID of the network
user	character (optional); uuid of the user. Only either user or group may be set!
group	character (optional); uuid of the group. Only either user or group may be set!

**Value**

1 integer on success, 0 if user/group already has no permissions on the network

**REST query**

GET: ndex\_config\$api\$network\$permission\$delete

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 1.3 and 2.0

In version 1.3 the function only works for user permissions!

**Examples**

```

## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find one of your networks and get its UUID
# networks = ndex_find_networks(ndexcon, accountName='MyAccountName')
# networkId = networks[1,"externalId"]
## Get the UUID for a user and group
# someUserUuid = "uuuuuuuu-ssss-eeee-rrrr-111111111111"
# someGroupUuid = "ggggggg-rrrr-oooo-uuuu-pppppppppppp"
## Delete the permissions
#ndex_network_delete_permission(ndexcon, networkId, user=someUserUuid)
# => returns 1
#ndex_network_delete_permission(ndexcon, networkId, user=someUserUuid)
# => returns 0, because user already lost permission on network
#ndex_network_delete_permission(ndexcon, networkId, group=someGroupUuid)
NULL

```

---

ndex\_network\_get\_aspect

*Get a Network Aspect As CX*

---

**Description**

This function retrieves the provided aspect as CX. The result is the same as accessing an aspect of a RCX object.

**Usage**

```
ndex_network_get_aspect(ndexcon, networkId, aspect, size)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
networkId	character; unique ID of the network
aspect	character; name of the aspect
size	integer; specifies the number of elements returned

**Value**

data.frame of the aspect data (the same as rcx[[aspectName]])

**REST query**

GET: ndex\_config\$api\$network\$aspect\$getMetaDataByName

**Note**

Compatible to NDEx server version 1.3 and 2.0, but doesn't work for version 1.3

## Examples

```
## Establish a server connection
ndexcon = ndex_connect()
## Find a network and get its UUID
networks = ndex_find_networks(ndexcon,"p53", "nci-pid")
networkId = networks[1,"externalId"]
## Get the aspect of a network
aspect = ndex_network_get_aspect(ndexcon, networkId, 'nodeAttributes')
# limit the returned elements of the aspect to the first 10 elements
aspect = ndex_network_get_aspect(ndexcon, networkId, 'nodeAttributes', 10)
```

---

ndex\_network\_get\_metadata

*Get Network CX Metadata Collection*

---

## Description

This function retrieves the (aspect) meta-data of the network identified by the supplied network UUID string.

## Usage

```
ndex_network_get_metadata(ndexcon, networkId)
```

## Arguments

ndexcon	object of class NDExConnection linkndex_connect
networkId	character; unique ID (UUID) of the network

## Value

metadata as list: consistencyGroup, elementCount, lastUpdate, name, properties, version and id-Counter

## REST query

GET: ndex\_config\$api\$network\$aspect\$getMetaData

## Note

Compatible to NDEx server version 1.3 and 2.0, but doesn't work for version 1.3

**Examples**

```

## Establish a server connection
ndexcon = ndex_connect()
## Find a network and get its UUID
networks = ndex_find_networks(ndexcon,"p53", "nci-pid")
networkId = networks[1,"externalId"]
## Get the network meta-data
ndex_network_get_metadata(ndexcon, networkId)

```

---

```

ndex_network_get_permission
    Get All Permissions on a Network

```

---

**Description**

This function retrieves the user or group permissions for a network

**Usage**

```
ndex_network_get_permission(ndexcon, networkId, type, permission, start, size)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
networkId	unique ID of the network
type	character ("user" "group"); specifies whether user or group permissions should be returned
permission	character (optional)("READ" "WRITE" "ADMIN"); constrains the type of the returned membership. If not set (or NULL), all permission types will be returned.
start	integer (optional); specifies that the result is the nth page of the requested data.
size	integer (optional); specifies the number of data items in each page.

**Value**

data.frame containing user or group UUIDs and the highest permission assigned to that user or group

**REST query**

```
GET: ndex_config$api$network$permission$get
```

**Note**

Compatible to NDEx server version 1.3 and 2.0

In version 1.3 the function only returns user permissions and differs in the returned data (more columns)!

Requires an authorized user! (ndex\_connect with credentials)

**Examples**

```

## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find one of your networks and get its UUID
# networks = ndex_find_networks(ndexcon, accountName='MyAccountName')
# networkId = networks[1,"externalId"]
## Get the permissions
# permissions = ndex_network_get_permission(ndexcon, networkId, 'user')
## Version 2.0:
## names(permission)
## [1] "memberUUID" "permission"
## Version 1.3:
## names(permission)
## [1] "membershipType" "memberUUID" "resourceUUID"
## [4] "memberAccountName" "permissions" "resourceName"
# permissions = ndex_network_get_permission(ndexcon, networkId, 'user', NULL) # same as previous
# permissions = ndex_network_get_permission(ndexcon, networkId, 'user', 'READ', 0, 10)
# permissions = ndex_network_get_permission(ndexcon, networkId, 'group')
NULL

```

---

ndex\_network\_get\_provenance

*Get Network Provenance*

---

**Description**

This function retrieves the provenance of the network identified by the supplied network UUID string.

**Usage**

```
ndex_network_get_provenance(ndexcon, networkId)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
networkId	unique ID of the network

**Value**

List of network metadata: ID, name, whether it is public, edge and node count; source and format of network

**REST query**

```
GET: ndex_config$api$network$provenance$get
```

**Note**

Compatible to NDEx server version 1.3 and 2.0

**Examples**

```
## Establish a server connection
ndexcon = ndex_connect()
## Find a network and get its UUID
networks = ndex_find_networks(ndexcon,"p53", "nci-pid")
networkId = networks[1,"externalId"]
## Get the network provenance
provenance = ndex_network_get_provenance(ndexcon, networkId)
```

---

ndex\_network\_get\_summary

*Get NetworkSummary by Network UUID*

---

**Description**

This function retrieves the summary of the network identified by the supplied network UUID string.

**Usage**

```
ndex_network_get_summary(ndexcon, networkId)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
networkId	unique ID of the network

**Value**

List of network metadata: ID, name, whether it is public, edge and node count; source and format of network

**REST query**

```
GET: ndex_config$api$network$summary$get
```

**Note**

Compatible to NDEx server version 1.3 and 2.0

**Examples**

```

## Establish a server connection
ndexcon = ndex_connect()
## Find a network and get its UUID
networks = ndex_find_networks(ndexcon,"p53", "nci-pid")
networkId = networks[1,"externalId"]
## Get the network summary
summary = ndex_network_get_summary(ndexcon, networkId)

```

---

ndex\_network\_set\_systemProperties

*Set Network System Properties*

---

**Description**

Network System properties are the properties that describe the network's status in a particular NDEX server but that are not part of the corresponding CX network object.

**Usage**

```

ndex_network_set_systemProperties(
  ndexcon,
  networkId,
  readOnly = NULL,
  visibility = NULL,
  showcase = NULL
)

```

**Arguments**

ndexcon	object of class NDEXConnection linkndex_connect
networkId	unique ID of the network
readOnly	boolean (optional); Sets the network to only readable. At least one of readOnly, visibility or showcase have to be set!
visibility	character (optional) ('PUBLIC' 'PRIVATE'); Sets the network to only readable. At least one of readOnly, visibility or showcase have to be set!
showcase	boolean (optional); Authenticated user can use this property to control whether this network will display in his or her home page. Caller will receive an error if the user does not have explicit permission to that network. At least one of readOnly, visibility or showcase have to be set!

**Value**

NULL on success; Error else

**REST query**

GET: ndex\_config\$api\$network\$systemproperties\$set

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 1.3 and 2.0

In version 1.3 only the parameter readOnly is supported

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find one of your networks and get its UUID
# networks = ndex_find_networks(ndexcon, accountName='MyAccountName')
# networkId = networks[1,"externalId"]
## Set network system properties
# ndex_network_set_systemProperties(ndexcon, networkId, readOnly=TRUE)
# ndex_network_set_systemProperties(ndexcon, networkId, visibility="PUBLIC")
# ndex_network_set_systemProperties(ndexcon, networkId, showcase=TRUE)
# ndex_network_set_systemProperties(ndexcon, networkId,
#                                 readOnly=FALSE, visibility="PRIVATE", showcase=FALSE)
NULL
```

---

ndex\_network\_update\_aspect

*Update an Aspect of a Network*

---

**Description**

This function updates an aspect with the provided CX for the aspect.

**Usage**

```
ndex_network_update_aspect(ndexcon, networkId, aspectName, aspectAsRCX)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
networkId	unique ID of the network
aspectName	name of the aspect
aspectAsRCX	rcx data for the aspect (rcx[[aspectName]])

**Value**

networkId unique ID of the modified network

**REST query**

PUT: ndex\_config\$api\$network\$aspect\$update

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find one of your networks and get its UUID
# networks = ndex_find_networks(ndexcon, accountName='MyAccountName')
# networkId = networks[1,"externalId"]
## Get the network data
# aspect = ndex_network_get_aspect(ndexcon, networkId, 'nodeAttributes')
## Do some changes to the aspect..
# aspectModified = aspect[1:5,]
## and update the aspect
# ndex_network_update_aspect(ndexcon,pws[1,"externalId"], 'nodeAttributes', aspectModified)
NULL
```

---

ndex\_network\_update\_permission

*Update Network Permission*

---

**Description**

Updates the permission of a user specified by userid or group specified by groupid for the network

**Usage**

```
ndex_network_update_permission(
  ndexcon,
  networkId,
  user = NULL,
  group = NULL,
  permission
)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
networkId	unique ID of the network
user	character (optional); uuid of the user. Only either user or group may be set!
group	character (optional); uuid of the group. Only either user or group may be set!
permission	character (optional)("READ" "WRITE" "ADMIN"); type of permission to be given. If granted admin permission, the current admin loses the admin status.

**Value**

1 integer on success, 0 if user/group already has this permissions on the network

**REST query**

GET: ndex\_config\$api\$network\$permission\$update

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 1.3 and 2.0, but doesn't work for version 1.3

In version 1.3 the function only works for user permissions!

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find one of your networks and get its UUID
# networks = ndex_find_networks(ndexcon, accountName='MyAccountName')
# networkId = networks[1,"externalId"]
## Get the UUID for a user and group
# someUserUuid = "uuuuuuuu-ssss-eeee-rrrr-111111111111"
# someGroupUuid = "ggggggg-rrrr-oooo-uuuu-pppppppppppp"
## Change the permissions
# ndex_network_update_permission(ndexcon, networkId, user=someUserUuid, 'WRITE')
# ndex_network_update_permission(ndexcon, networkId, group=someGroupUuid, 'READ')
## Set a new admin (lose own admin status)
# ndex_network_update_permission(ndexcon, networkId, user=someUserUuid, 'ADMIN')
NULL
```

---

ndex\_network\_update\_profile

*Update Network Profile*

---

**Description**

Updates the profile information of the network. Any profile attributes specified will be updated but attributes that are not specified will have no effect - omission of an attribute does not mean deletion of that attribute.

**Usage**

```
ndex_network_update_profile(
  ndexcon,
  networkId,
  name = NULL,
  description = NULL,
  version = NULL
)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
networkId	unique ID of the network
name	character (optional); Changes the name the network. At least one of name, description or version have to be set!
description	character (optional); Changes the description the network. At least one of name, description or version have to be set!
version	character (optional); Changes the version the network. At least one of name, description or version have to be set!

**Value**

NULL on success; Error else

**REST query**

GET: ndex\_config\$api\$network\$profile\$update

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 1.3 and 2.0

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find one of your networks and get its UUID
# networks = ndex_find_networks(ndexcon, accountName='MyAccountName')
# networkId = networks[1,"externalId"]
## Update network profile
# ndex_network_update_profile(ndexcon, networkId, name="Some fancy name for the network")
# ndex_network_update_profile(ndexcon, networkId, description="Description of the network")
# ndex_network_update_profile(ndexcon, networkId, version="1.2.3.4")
# ndex_network_update_profile(ndexcon, networkId, name="Special test network",
#                             description="Nothing to see here", version="1.3")
NULL
```

---

ndex\_update\_group      *Update Group*

---

**Description**

Updates the group based on the data.

**Usage**

```

ndex_update_group(
    ndexcon,
    groupId,
    groupName,
    image,
    website,
    description,
    properties
)

```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
groupId	character; unique ID (UUID) of the group
groupName	character; name of the new group
image	character (optional); URL of the account owner's image.
website	character (optional); URL of the account owner's web site
description	character (optional); Short description of this user.
properties	list (optional); additional properties for the group

**Value**

Empty string ("") on success, else error

**REST query**

PUT: ndex\_config\$api\$user\$update

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

**Examples**

```

## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find user and get its id
# user = ndex_find_user_byName(ndexcon, 'MyAccountName')
# userId = user$externalId
## Find the user's groups and get one group id
# groups = ndex_user_list_groups(ndexcon, userId)
# groupId = groups[1,"externalId"]
## Update the group
# ndex_update_group(ndexcon, groupId, description='A really nice group!')
NULL

```

---

ndex\_update\_network     *Update an Entire Network as CX*

---

### Description

This method updates/replaces a existing network on the NDEx server with new content from the given RCX object. The UUID can either be specified manually or it will be extracted from the RCX object (i.e. from rcx\$ndexStatus\$externalId).

### Usage

```
ndex_update_network(ndexcon, rcx, networkId)
```

### Arguments

ndexcon	object of class NDExConnection linkndex_connect
rcx	RCX object
networkId	(optional); unique ID of the network

### Value

UUID of the updated network

### REST query

PUT (multipart/form-data): ndex\_config\$api\$network\$update\$url data: CXNetworkStream = data

### Note

Requires an authorized user! (ndex\_connect with credentials)  
Compatible to NDEx server version 1.3 and 2.0

### Examples

```
## Establish a server connections with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find one of your networks and get its UUID
# networks = ndex_find_networks(ndexcon, accountName='MyAccountName')
# networkId = networks[1,"externalId"]
## Get the network data
# rcx = ndex_get_network(ndexcon, networkId)
## Do some changes to rcx..
## and update the network
# networkId = ndex_update_network(ndexcon, rcx, networkId)
# networkId = ndex_update_network(ndexcon, rcx) ## same as previous
NULL
```

---

ndex\_update\_user      *Update User*

---

**Description**

Updates the authenticated user based on the data. Errors, if the user for ndexcon and uuid are different.

**Usage**

```
ndex_update_user(
    ndexcon,
    userId,
    emailAddress,
    isIndividual,
    displayName,
    firstName,
    lastName,
    image,
    website,
    description,
    verbose = FALSE
)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
userId	character; unique ID of the user
emailAddress	character (optional); email address (used for verification if enabled)
isIndividual	boolean (default:True); True if this account is for an individual user. False means this account is for an organization or a project etc.
displayName	character (optional); Display name of this account, only applied to non-individual accounts.
firstName	character (optional); Account owner's first name, only applies to individual accounts.
lastName	character (optional); Account owner's last name, only applies to individual accounts.
image	character (optional); URL of the account owner's image.
website	character (optional); URL of the account owner's web site
description	character (optional); Short description of this user.
verbose	logical (optional); whether to print out extended feedback

**Value**

Empty string (""), on success, else error

**REST query**

GET: ndex\_config\$api\$user\$update

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find user and get its id
# user = ndex_find_user_byName(ndexcon, 'SomeUserName')
# userId = user$externalId
## Update user
# ndex_update_user(ndexcon, userId, firstName = 'Homer Jay', lastName = 'Simpson')
# ndex_update_user(ndexcon, userId, displayName = 'Max Power',
#                 image='https://upload.wikimedia.org/wikipedia/en/0/02/Homer_Simpson_2006.png',
#                 description='One of the most influential characters in the history of TV')
NULL
```

---

ndex\_user\_change\_password

*Change Password*

---

**Description**

Changes the authenticated user's password to the new password

**Usage**

ndex\_user\_change\_password(ndexcon, userId, password)

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
userId	character; unique ID of the user
password	character; New password

**Value**

Empty string on success, else error

**REST query**

GET: ndex\_config\$api\$user\$password\$change

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find user and get its id
# user = ndex_find_user_byName(ndexcon, 'SomeUserName')
# userId = user$externalId
## Change user password
# ndex_user_change_password(ndexcon, userId, 'SuperSaveNewPassword')
NULL
```

---

ndex\_user\_forgot\_password

*Forgot Password*

---

**Description**

Causes a new password to be generated for the given user account and then emailed to the user's emailAddress

**Usage**

```
ndex_user_forgot_password(ndexcon, userId)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
userId	character; unique ID of the user

**Value**

Empty string on success, else error

**REST query**

GET: ndex\_config\$api\$user\$password\$mail Wrapper for ndex\_user\_mail\_password()

**Note**

Compatible to NDEx server version 2.0

## Examples

```
## Establish a server connection
# ndexcon = ndex_connect()
## Find user and get its id
# user = ndex_find_user_byName(ndexcon, 'SomeUserName')
# userId = user$externalId
## Request new password via email

```

---

ndex\_user\_get\_networksummary

*Get User's Account Page Networks*

---

## Description

This is a convenience function designed to support "My Account" pages in NDEx applications. It returns a list of NetworkSummary objects to display.

## Usage

```
ndex_user_get_networksummary(ndexcon, userId)
```

## Arguments

ndexcon	object of class NDExConnection linkndex_connect
userId	character; unique ID (UUID) of the user

## Value

data.frame of networks (name, description, externalId, uri, etc.) on the account page of the specified user

## REST query

```
GET: ndex_config$api$user$networksummary
```

## Note

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## get user by name to get UUID
# user = ndex_find_user_byName(ndexcon, 'MyAccountName')
# userId = user$externalId
## get all network permissions of the user
# networkSummary = ndex_user_get_networksummary(con, user$externalId)
# names(networkSummary)
## [1] "ownerUUID"      "isReadOnly"    "subnetworkIds" "errorMessage"  "isValid"
## [6] "warnings"      "isShowcase"   "visibility"    "edgeCount"     "nodeCount"
##[11] "uri"           "version"      "owner"        "name"          "properties"
##[16] "description"   "externalId"   "isDeleted"    "modificationTime" "creationTime"
NULL
```

---

ndex\_user\_get\_showcase

*Get User's Showcase Networks*

---

**Description**

This is a convenience function to support "user pages" in NDEx applications. This function returns a list of network summary objects that the user who is specified by userid chose to display in his or her home page. For authenticated users, this function returns the networks that the authenticated user can read, for anonymous users, this function returns only public networks.

**Usage**

```
ndex_user_get_showcase(ndexcon, userId)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
userId	character; unique ID (UUID) of the user

**Value**

data.frame of networks (name, description, externalId, uri, etc.) in the showcase of the specified user

**REST query**

```
GET: ndex_config$api$user$showcase
```

**Note**

Compatible to NDEx server version 2.0

**Examples**

```

## Establish a server connection
ndexcon = ndex_connect()
## get user by name to get UUID
user = ndex_find_user_byName(ndexcon, 'ndextutorials')
userId = user$externalId
## get all network permissions of the user
showcase = ndex_user_get_showcase(ndexcon, userId)
names(showcase)
## [1] "ownerUUID"      "isReadOnly"     "subnetworkIds"  "errorMessage"   "isValid"
## [6] "warnings"       "isShowcase"    "visibility"     "edgeCount"      "nodeCount"
##[11] "uri"           "version"       "owner"         "name"           "properties"
##[16] "description"   "externalId"    "isDeleted"     "modificationTime" "creationTime"

```

---

ndex\_user\_list\_groups *Get User's Group Memberships*

---

**Description**

Query finds groups for which the current user has the specified membership type. If the "type" parameter is omitted, all membership types will be returned. Returns a map which maps a group UUID to the membership type the authenticated user has.

**Usage**

```
ndex_user_list_groups(ndexcon, userId, type = NULL, start = NULL, size = NULL)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
userId	character; unique ID (UUID) of the user
type	character (optional)("MEMBER" "GROUPADMIN"); constrains the type of the returned membership. If not set (or NULL), all permission types will be returned.
start	integer (optional); specifies that the result is the nth page of the requested data.
size	integer (optional); specifies the number of data items in each page.

**Value**

List of permissions of that user or empty object

**REST query**

GET: ndex\_config\$api\$user\$group\$list

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find user and get its id
# user = ndex_find_user_byName(ndexcon, 'MyAccountName')
# userId = user$externalId
## Find the user's groups and get one group id
# groups = ndex_user_list_groups(ndexcon, userId)
## $`ggggggg-rrrr-oooo-uuuu-pppppp111111`
## [1] "MEMBER"
##
## $`ggggggg-rrrr-oooo-uuuu-pppppp222222`
## [1] "GROUPADMIN"
# groupIds = names(groups)
## [1] "ggggggg-rrrr-oooo-uuuu-pppppp111111" "ggggggg-rrrr-oooo-uuuu-pppppp222222"
NULL
```

---

ndex\_user\_list\_permissions

*Get User's Network Permissions*

---

**Description**

This function returns networks for which the authenticated user is assigned the specified permission. Userid is the UUID of the authenticated user. Returns a JSON map in which the keys are network UUIDs and values are the highest permission assigned to the authenticated user. #'

**Usage**

```
ndex_user_list_permissions(
  ndexcon,
  userId,
  type = NULL,
  directonly = FALSE,
  start = NULL,
  size = NULL
)
```

**Arguments**

ndexcon	object of class NDExConnection linkndex_connect
userId	character; unique ID (UUID) of the user

type	character (optional)("READ" "WRITE" "ADMIN"); constrains the type of the returned permission. If not set (or NULL), all permission types will be returned.
directonly	logical (default: FALSE); If directonly is set to true, permissions granted through groups are not included in the result
start	integer (optional); specifies that the result is the nth page of the requested data.
size	integer (optional); specifies the number of data items in each page.

**Value**

List of highest permissions of that user or empty object

**REST query**

GET: ndex\_config\$api\$user\$permission\$list

**Note**

Requires an authorized user! (ndex\_connect with credentials)

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## get user by name to get UUID
# user = ndex_find_user_byName(ndexcon, 'MyAccountName')
# userId = user$externalId
## get all network permissions of the user
# networkPermissions = ndex_user_list_permissions(ndexcon, userId)
## $`nnneeett-www-oooo-rrrr-kkkkkk1111`
## [1] "ADMIN"
## $`nnneeett-www-oooo-rrrr-kkkkkk2222`
## [1] "WRITE"
## $`nnneeett-www-oooo-rrrr-kkkkkk3333`
## [1] "READ"
# networkIds = names(networkPermissions)
## [1] "nnneeett-www-oooo-rrrr-kkkkkk1111" "nnneeett-www-oooo-rrrr-kkkkkk2222"
## [3] "nnneeett-www-oooo-rrrr-kkkkkk3333"
## get all networks for which the user has Admin permissions
# networkPermissions = ndex_user_list_permissions(ndexcon, userId, type='ADMIN')
## $`nnneeett-www-oooo-rrrr-kkkkkk1111`
## [1] "ADMIN"
## get all networks for which the user has direct access
# networkPermissions = ndex_user_list_permissions(ndexcon, user$externalId, directonly=TRUE)
## $`nnneeett-www-oooo-rrrr-kkkkkk1111`
## [1] "ADMIN"
NULL
```

---

`ndex_user_mail_password`*Email New Password*

---

**Description**

Causes a new password to be generated for the given user account and then emailed to the user's emailAddress

**Usage**

```
ndex_user_mail_password(ndexcon, userId)
```

**Arguments**

<code>ndexcon</code>	object of class NDExConnection linkndex_connect
<code>userId</code>	character; unique ID of the user

**Value**

Empty string on success, else error

**REST query**

GET: ndex\_config\$api\$user\$password\$mail

**Note**

Compatible to NDEx server version 2.0

**Examples**

```
## Establish a server connection
# ndexcon = ndex_connect()
## Find user and get its id
# user = ndex_find_user_byName(ndexcon, 'SomeUserName')
# userId = user$externalId
## Request new password via email
# ndex_user_mail_password(ndexcon, userId)
NULL
```

---

ndex\_user\_show\_group *Get User's Membership in Group*

---

### Description

Returns the permission that the user specified in the URL has on the given group. Returns an empty object if the authenticated user is not a member of this group.

### Usage

```
ndex_user_show_group(ndexcon, userId, groupId)
```

### Arguments

ndexcon	object of class NDExConnection linkndex_connect
userId	character; unique ID (UUID) of the user
groupId	character; unique ID (UUID) of the group

### Value

List of permissions of that user or empty object

### REST query

```
GET: ndex_config$api$user$group$get
```

### Note

Requires an authorized user! (ndex\_connect with credentials)  
Compatible to NDEx server version 2.0

### Examples

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## Find user and get its id
# user = ndex_find_user_byName(ndexcon, 'SomeUserName')
# userId = user$externalId
## Find the user's groups and get one group id
# groups = ndex_user_list_groups(ndexcon, userId)
# groupId = groups[1,"externalId"]
## get users's permission in the group
# userPermissions = ndex_user_show_group(ndexcon, userId, groupId)
## $`uuuuuuuu-ssss-eeee-rrrr-123456789abc`
## [1] "MEMBER"
NULL
```

---

`ndex_user_show_permission`*Get User's Permission for Network*

---

## Description

Get the type(s) of permission assigned to the authenticated user for the specified network. Returns a map which maps a network UUID to the highest permission assigned to the authenticated user.

## Usage

```
ndex_user_show_permission(ndexcon, userId, networkId, directonly = FALSE)
```

## Arguments

<code>ndexcon</code>	object of class <code>NDExConnection</code> link <code>ndex_connect</code>
<code>userId</code>	character; unique ID (UUID) of the user
<code>networkId</code>	character; unique ID (UUID) of the group
<code>directonly</code>	logical (default: <code>FALSE</code> ); If <code>directonly</code> is set to true, permissions granted through groups are not included in the result

## Value

List of permissions of that user ("READ"|"WRITE"|"ADMIN") or empty object

## REST query

```
GET: ndex_config$api$user$permission$get
```

## Note

Requires an authorized user! (`ndex_connect` with credentials)

Compatible to NDEx server version 2.0

## See Also

[ndex\\_network\\_get\\_permission](#)

## Examples

```
## Establish a server connection with credentials
# ndexcon = ndex_connect('MyAccountName', 'MyPassword')
## get user by name to get UUID
# user = ndex_find_user_byName(ndexcon, 'MyAccountName')
# userId = user$externalId
## Find one of your networks and get its UUID
# networks = ndex_find_networks(ndexcon, accountName='MyAccountName')
```

```
# networkId = networks[1,"externalId"]
## get users's permission to a network
# networkPermissions = ndex_user_show_permission(ndexcon, userId, networkId, directly=TRUE)
## $`nnneeett-www-oooo-rrrr-kkkkkk11111`
## [1] "ADMIN"
NULL
```

---

ndex\_verify\_user      *Verify a User*

---

### Description

Verify the given user with UUID and verification code, which is set by email

### Usage

```
ndex_verify_user(ndexcon, userId, code)
```

### Arguments

ndexcon	object of class NDExConnection linkndex_connect
userId	character; unique ID of the user
code	character; Verification code sent by email

### Value

string "User account XXX has been activated." when this user's account is successfully activated.

### REST query

GET: ndex\_config\$api\$user\$verify

### Note

Compatible to NDEx server version 2.0

### Examples

```
## Establish a server connection
# ndexcon = ndex_connect()
## Find user and get its id
# user = ndex_find_user_byName(ndexcon, 'SomeUserName')
# userId = user$externalId
## Verify user with verification code
# ndex_verify_user(ndexcon, userId, '0sqy11mRZ9')
## [1] "User account XXX has been activated."
NULL
```

---

rcxgraph_toRCX	<i>Create RCX object from RCXgraph object</i>
----------------	---

---

## Description

This function creates an [RCX](#) object from a valid [RCXgraph](#) object.

The following rules apply to convert from [RCXgraph](#) to [RCX](#):

- all graph attributes are stored as named data.frames within the [RCX](#) object
- nodes receive their name value as "@id" attribute. All other node attributes are saved in the [RCX](#) object as nodeAttributes, access via `rcx[["nodeAttributes"]]`. Data goes from wide format (columns for each unique n with cells containing v) to long format (column n containing attribute name and column v containing attribute value).
- edges are connected via their "s"art and "t"arget fields. The "@id" and "i"nteraction attribute are stored as is and all edgeAttributes are saved as node attributes, access via `rcx[["edgeAttributes"]]`. Data goes from wide format (columns for each unique n with cells containing v) to long format (column n containing attribute name and column v containing attribute value).

## Usage

```
rcxgraph_toRCX(rcxgraph, verbose = FALSE)
```

```
rcx_fromRCXgraph(rcxgraph, verbose = FALSE)
```

## Arguments

rcxgraph	<a href="#">RCX</a> object
verbose	logical; whether to print out extended feedback

## Details

An [RCXgraph](#) object could look like this:

```
## Get some network...
> ndexcon = ndex_connect()
> rcx = ndex_get_network(ndexcon, "dd268e2f-fd4d-11e7-adc1-0ac135e8bacf")

```

---

rcx\_asNewNetwork

*Remove all interfering NDEx artefacts from RCX object*

---

**Description**

Remove all interfering NDEx artefacts from RCX object

**Usage**

```
rcx_asNewNetwork(rcx)
```

**Arguments**

rcx	RCX object
-----	------------

**Details**

After a RCX object is downloaded from an NDEx server, it will contain some aspects that are not present in a newly generated network, i.e. `ndexStatus`, `provenanceHistory` and `status`. Removing those aspects might be useful in some cases.

**Value**

RCX object

**See Also**

[rcx\\_fromJSON](#)

**Examples**

```
## Create an RCX object
rcx = rcx_new(c('@id'=1, n='Some Name', r='HGNC:Symbol'))
## Remove NDEx artefacts
rcx = rcx_asNewNetwork(rcx)
## Not run:
rcxjson = rcx_toJSON(rcx)
ndex_create_network(ndexcon, rcxjson)

## End(Not run)
```

---

`rcx_fromJSON`

*Create RCX object from JSON data*

---

**Description**

This function creates an RCX object from a supplied JSON-encoded CX object. RCX objects store the CX data as a named list of `data.frames` containing `metaData` and all aspects of the network.

**Usage**

```
rcx_fromJSON(json, verbose = FALSE)
```

**Arguments**

json	JSON data
verbose	logical; whether to print out extended feedback

**Details**

The structure of an RCX object, as shown via `str(rcx)` could be a list like this:

```
> str(rcx)
```

```
List of 12
```

```

---

rcx_toJSON	<i>Generate JSON data from RCX object</i>
------------	---

---

### Description

Generate JSON data from RCX object

### Usage

```
rcx_toJSON(rcx, verbose = FALSE, pretty = FALSE)
```

### Arguments

rcx	RCX object
verbose	logical; whether to print out extended feedback
pretty	logical; adds indentation whitespace to JSON output

### Value

json jsonlite json object if successfull, NULL otherwise

### See Also

[rcxgraph\\_fromRCX](#) [rcxgraph\\_toRCX](#) [rcx\\_fromJSON](#)

### Examples

```
## Create an RCX object
rcx = rcx_new(c('@id'=1, n='Some Name', r='HGNC:Symbol'))
## Convert to JSON
json = rcx_toJSON(rcx)
```

---

rcx_toRCXgraph	<i>Create RCXgraph object from RCX object</i>
----------------	---

---

### Description

This function creates an RCXgraph object from a supplied [RCX](#) object. RCX objects store the CX data as a named list of data.frames containing metaData and all aspects of the network. The RCXgraph class inherits from igraph and contains the complete (R)CX information as graph, node and edge attributes. All [igraph](#) functionality is available, e.g. access nodes and edges of igraph g via V(g) and E(g) and their attributes via V(g)\$attribute

**Usage**

```
rcx_toRCXgraph(
  rcx,
  idAsVertexName = FALSE,
  idAsEdgeName = FALSE,
  verbose = FALSE
)
```

```
rcxgraph_fromRCX(
  rcx,
  idAsVertexName = FALSE,
  idAsEdgeName = FALSE,
  verbose = FALSE
)
```

**Arguments**

rcx	RCX object
idAsVertexName	logical; whether the ndex node id ("@id") should be used as name for the igraph node (i.e. vertex). By default the "name" property is used
idAsEdgeName	logical; whether the ndex edge id ("@id") should be used as name for the igraph edge. By default the "interaction" property is used
verbose	logical; whether to print out extended feedback

**Details**

The following rules apply to convert from RCX to RCXgraph:

- nodes receive their name from RCX\$node\$n. If idAsVertexName is TRUE, the "@id" value is used as name. All other information in aspects node and nodeAttributes are saved as `vertex_attr`, access via V(g). Data goes from long format (column n containing attribute name and column v containing attribute value) to wide format (columns for each unique n with cells containing v).
- edges are connected via their "source" and "target" fields. The "@id" and "interaction" attribute are stored as is and all edgeAttributes are saved as `edge_attr`, access via E(g). Data goes from long format (column n containing attribute name and column v containing attribute value) to wide format (columns for each unique n with cells containing v).
- all other aspect data is stored as graph attributes, access via g\$<aspectName>

The following rules apply to convert RCXgraph back to RCX:

- Two vertex attributes "n" and "@id" have to be present in RCXgraph! Those two are mandatory RCX node properties!
- The igraph vertex name is ignored for the conversion! If the name is needed, adjust manually, e.g.: V(RCXgraph)\$n <- V(RCXgraph)\$name
- The edge attribute "@id" has to be present in RCXgraph! This is a mandatory RCX edge property!

An RCXgraph object could look like this:

```
## Get some network...
> ndexcon = ndex_connect()
> rcx = ndex_get_network(ndexcon,"dd268e2f-fd4d-11e7-adc1-0ac135e8bacf")

> summary(rcxgraph)

---

rcx\_updateMetaData      *Updating the meta-data of an RCX object*

---

## Description

Updating the meta-data of an RCX object

## Usage

```

rcx_updateMetaData(
  rcx,
  mandatoryAspects = c("nodes"),
  excludeAspects = c("metaData", "numberVerification", "status"),
  force = FALSE,
  verbose = FALSE
)

```

## Arguments

rcx	RCX object
mandatoryAspects	character vector; Aspects, that are mandatory for a valid RCX object (by default: "nodes")
excludeAspects	character vector; Aspects, that are excluded for generating metaData (by default: "metaData", "numberVerification" and "status")
force	logical; force the creation of new metaData (even if the RCX object already contains metaData)
verbose	logical; whether to print out extended feedback

## Details

For a given RCX object the meta-data is updated, i.e. the counted elements and id counter are updated. If an aspect was added/removed, it will also added/removed from the meta-data. If mandatory aspects (specified in mandatoryAspects parameter) are missing in the RCX object, an error is thrown.

## Value

RCX object

**Examples**

```
## Create an RCX object
rcx = rcx_new(c('@id'=1, n='Some Name', r='HGNC:Symbol'))
## update meta-data
rcx = rcx_updateMetaData(rcx)
# or with explicitly set default values
rcx = rcx_updateMetaData(rcx, mandatoryAspects=c('nodes'),
                        excludeAspects=c("metaData", "numberVerification", "status"),
                        force=FALSE, verbose=FALSE)
```
