

Package ‘ggcyto’

April 14, 2017

Type Package

Title Visualize Cytometry data with ggplot

Version 1.2.3

Date 2015-11-02

Author Mike Jiang

Maintainer Mike Jiang <wjiang2@fhcrc.org>

Description With the dedicated fority method implemented for flowSet, ncdfFlowSet and GatingSet classes, both raw and gated flow cytometry data can be plotted directly with ggplot. ggcyto wrapper and some customized layers also make it easy to add gates and population statistics to the plot.

VignetteBuilder knitr

Depends methods, ggplot2(>= 2.0.0), flowCore, ncdfFlow(>= 2.17.1), flowWorkspace(>= 3.17.24)

Imports plyr, scales, data.table, RColorBrewer, gridExtra

Suggests testthat, flowWorkspaceData, knitr, rmarkdown, flowStats, openCyto, flowViz

License Artistic-2.0

+.ggcyto_flowSet	<i>overloaded '+' method for ggcyto</i>
------------------	---

Description

It tries to copy pData from ggcyto object to the gate layers so that the gate layer does not need to have 'pd' to be supplied explicitly by users. It also calculates population statistics when geom_stats layer is added. It supports addition ggcyto layers such as 'ggcyto_par' and 'labs_cyto'.

Usage

```
## S3 method for class 'ggcyto_flowSet'  
e1 + e2  
  
## S4 method for signature 'ggcyto_flowSet,ANY'  
e1 + e2
```

Arguments

e1 An object of class `ggcyto_flowSet`
e2 A component to add to e1

Value

`ggcyto_flowSet` object

Examples

```
data(GvHD)  
fs <- GvHD[subset(pData(GvHD), Patient %in%5:7 & Visit %in% c(5:6))][["name"]]  
p <- ggcyto(fs, aes(x = `FSC-H`, y = `SSC-H`)) + geom_hex(bins = 128)  
#add rectangleGate layer (2d)  
rect.g <- rectangleGate(list("FSC-H" = c(300,500), "SSC-H" = c(50,200)))  
rect.gates <- sapply(sampleNames(fs), function(sn)rect.g)  
p + geom_gate(rect.gates) + geom_stats()
```

`+.ggcyto_GatingLayout` *overloaded '+' method for ggcyto_gate_layout*

Description

It adds the layer specified by 'e2' to each individual ggplot object stored in `ggcyto_gate_layout`

Usage

```
## S3 method for class 'ggcyto_GatingLayout'  
e1 + e2  
  
## S4 method for signature 'ggcyto_GatingLayout,ANY'  
e1 + e2
```

Arguments

e1 `ggcyto_gate_layout`
e2 any ggplot layer

Value

a modified `ggcyto_gate_layout` object
a `GatingLayout` object

Examples

```
#autoplot for GatingSet
dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
gh <- gs[[1]]
p <- autoplot(gh)
class(p)
# customize the font size of strip text for each ggcyto plots contained in GatingLayout object
p + theme(strip.text = element_text(size = 14))
```

```
+.ggcyto_GatingSet      overloaded '+' method for ggcyto.gs
```

Description

It takes care the special format of some ggcyto layers. For example geom_gate or geom_stats layer with just gate(population) name specified, It only supports some special axis transformations. (See examples below)

Usage

```
## S3 method for class 'ggcyto_GatingSet'
e1 + e2

## S4 method for signature 'ggcyto_GatingSet,ANY'
e1 + e2
```

Arguments

```
e1          An object of class ggcyto
e2          A component to add to e1
```

Value

ggcyto_GatingSet object

Examples

```
dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
p <- ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)
p <- p + geom_gate("CD4") + geom_stats() #plot CD4 gate and it is stats
p
p + axis_x_inverse_trans() #inverse transform the x axis into raw scale
```

as.ggplot	<i>It fortifies the data, fills some default settings and returns a regular ggplot object.</i>
-----------	--

Description

The original data format is preserved during the ggcyto constructor because they still need to be used during the plot building process. This function is usually called automatically in the print/plot method of ggcyto. Sometime it is useful to coerce it to ggplot explicitly by user so that it can be used as a regular ggplot object.

Usage

```
as.ggplot(x)
```

Arguments

x ggcyto object with the data that has not yet been fortified to data.frame.

Value

ggplot object

Examples

```
data(GvHD)
fs <- GvHD[1:3]
#construct the `ggcyto` object (inherits from `ggplot` class)
p <- ggcyto(fs, aes(x = `FSC-H`)) + geom_histogram()
class(p) # a ggcyto object
p$data # data has not been fortified
p1 <- as.ggplot(p) # convert it to a ggplot object explicitly
class(p1)
p1$data # data is fortified
```

autoplot.flowSet	<i>Plot fluorescence intensity in one or two dimension.</i>
------------------	---

Description

Overloaded autoplot for the cytometry data structure: flowFrame or flowSet, Gatinghierarchy, GatingSet. It plots the cytometry data with geom_histogram, geom_density or geom_hex.

Usage

```
## S3 method for class 'flowSet'
autoplot(object, x, y = NULL, bins = 30, ...)

## S3 method for class 'ncdfFlowList'
autoplot(object, ...)

## S3 method for class 'flowFrame'
autoplot(object, x, ...)

## S3 method for class 'GatingSetList'
autoplot(object, ...)

## S3 method for class 'GatingSet'
autoplot(object, gate, x = NULL, y = "SSC-A",
         bins = 30, ...)

## S3 method for class 'GatingHierarchy'
autoplot(object, gate, y = "SSC-A", bool = FALSE,
         arrange.main = sampleNames(object), arrange = TRUE, merge = TRUE,
         projections = list(), strip.text = c("parent", "gate"), ...)
```

Arguments

object	flowFrame, flowSet, GatingSet object
x	define the x dimension of the plot. When object is a flowFrame, it can be missing, which plots 1d density plot on all the channels.
y	define the y dimension of the plot. Default is NULL, which means 1d density-plot.
bins	passed to geom_hex
...	other arguments passed to ggplot
gate	the gate to be plotted
bool	whether to plot boolean gates
arrange.main	the main title of the arranged plots
arrange	whether to use arrangeGrob to put multiple plots in the same page
merge	whether to merge multiple gates into the same panel when they share the same parent and projections
projections	a list of customized projections
strip.text	either "parent" (the parent population name) or "gate" (the gate name). The latter usually is used when merge is FALSE

Value

a ggcyto object

Examples

```
library(flowCore)
data(GvHD)
```

```

fs <- GvHD[subset(pData(GvHD), Patient %in%5:7 & Visit %in% c(5:6))["name"]]

#1d- density plot
autoplot(fs, x = "SSC-H")

#1d- density plot on all channels
autoplot(fs[[1]])

#2d plot: default geom_hex plot
autoplot(fs, x = 'FSC-H', y ='SSC-H')

#autoplot for GatingSet
dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
autoplot(gs, "CD3+")

#autoplot for GatingHierarchy
gh <- gs[[1]]
autoplot(gh) # by default the strip.text shows the parent population

#To display the gate name
#autoplot(gh , strip.text = "gate")

```

axis_x_inverse_trans *Display axis labels in raw scales*

Description

It is essentially a dummy continuous scale and will be instantiated by '+.ggcyto_GatingSet' with 'breaks' and 'lables' customized.

Usage

```
axis_x_inverse_trans(...)
```

```
axis_y_inverse_trans(...)
```

Arguments

... common continuous scale parameters passed to 'continuous_scale' (not used currently)

Value

a raw_scale object that inherits scale class.

Examples

```

dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
p <- ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)
p <- p + geom_gate("CD4") + geom_stats() #plot CD4 gate and it is stats
p
p + axis_x_inverse_trans() #inverse transform the x axis into raw scale

```

compute_stats	<i>compute the statistics of the cell population defined by gates</i>
---------------	---

Description

It calls the underlining stats routine and merge it with the label position calculated by `stat_position` as well as the `pData` of `flowSet`.

Usage

```
compute_stats(fs = NULL, gates, type = "percent", value = NULL,
             data_range = NULL, ...)
```

Arguments

<code>fs</code>	flowSet. can be <code>NULL</code> when precalculated 'value' is provided
<code>gates</code>	a list of filters
<code>type</code>	can be "percent", "count" or "MFI".
<code>value</code>	the pre-calculated stats value. when supplied, the stats computing is skipped.
<code>data_range</code>	the data range for each channels
<code>...</code>	other arguments passed to <code>stat_position</code> function

Details

This function is usually not called directly by user but used by `ggcyto` when `geom_stat` layer is added.

Value

a `data.table` that contains percent and centroid locations as well as `pData` that used as data for `geom_btext` layer.

Examples

```
data(GvHD)
fs <- GvHD[1:4]
rect.g <- rectangleGate(list("FSC-H" = c(300,500), "SSC-H" = c(50,200)))
rect.gates <- sapply(sampleNames(fs), function(sn)rect.g)
compute_stats(fs, rect.gates)
```

fortify.ellipsoidGate *Convert a ellipsoidGate to a data.table useful for ggplot*

Description

It interpolates the ellipsoidGate to polygongate before fortifying it.

Usage

```
## S3 method for class 'ellipsoidGate'
fortify(model, data = NULL, ...)
```

Arguments

model	ellipsoidGate
data	data range used for polygon interpolation.
...	not used.

Value

data.table

Examples

```
## Defining the gate
cov <- matrix(c(6879, 3612, 3612, 5215), ncol=2,
              dimnames=list(c("FSC-H", "SSC-H"), c("FSC-H", "SSC-H")))
mean <- c("FSC-H"=430, "SSC-H"=175)
eg <- ellipsoidGate(filterId= "myEllipsoidGate", .gate=cov, mean=mean)
fortify(eg)
```

fortify.filterList *Convert a filterList to a data.table useful for ggplot*

Description

It tries to merge with pData that is associated with filterList as attribute 'pd'

Usage

```
## S3 method for class 'filterList'
fortify(model, data = NULL, nPoints = NULL, ...)
```

Arguments

model	filterList
data	data range used for polygon interpolation
nPoints	used for interpolating polygonGates to prevent it from losing shape when truncated by axis limits
...	not used.

Value

data.table

Examples

```
dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
gates <- getGate(gs, "CD4")
gates <- as(gates, "filterList") #must convert list to filterList in order for the method to dispatch properly
fortify(gates)
```

fortify.flowFrame	<i>Convert a flowFrame/flowSet/GatingSet to a ggplot-compatible data.table</i>
-------------------	--

Description

It extracts events matrices and appends the pData to it so that ggplot can use the pData for facetting.

Usage

```
## S3 method for class 'flowFrame'
fortify(model, data, ...)

## S3 method for class 'flowSet'
fortify(model, data, ...)

## S3 method for class 'ncdfFlowList'
fortify(model, ...)

## S3 method for class 'GatingSetList'
fortify(model, ...)

## S3 method for class 'GatingSet'
fortify(model, ...)
```

Arguments

model	flowFrame, flowSet or GatingSet
data	not used.
...	not used.

Value

data.table
 data.table
 data.table

Examples

```

dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))

attr(gs, "subset") <- "CD4" #must attach subset information to GatingSet object before fortifying it
fortify(gs)

fs <- getData(gs, "CD8")
fortify(fs)#fs is a flowSet/ncdfFlowSet

fr <- fs[[1]]
fortify(fr)#fr is a flowFrame

```

fortify.polygonGate *Convert a polygonGate to a data.table useful for ggplot*

Description

It converts the boundaries slot into a data.table When 'nPoints' is supplied, the method tries to interpolate the polygon with more vertices.

Usage

```

## S3 method for class 'polygonGate'
fortify(model, data = NULL, nPoints = NULL, ...)

```

Arguments

model	polygonGate
data	data range used to reset off-bound gate coordinates to prevent interpolating on the extremely large space unnecessarily.
nPoints	total number of vertices of the polygon after interpolation. Default is NULL, which is no interpolation. The actual number may be more or less based on the lengths of edges due to the maximum and minimum limits on each edge. Interpolation is mainly for the purpose of plotting (so that it won't lose its shape from subsetting through 'limits'). But it is not necessary for other purposes like centroid calculation.
...	not used.

Value

data.table

Examples

```

sqrct <- matrix(c(300,300,600,600,50,300,300,50),ncol=2,nrow=4)
colnames(sqrct) <- c("FSC-H","SSC-H")
pg <- polygonGate(filterId="nonDebris", .gate= sqrct)
fortify(pg) #no interpolation
fortify(pg, nPoints = 30) # with interpolation

```

`fortify.rectangleGate` *Convert a rectangleGate to a data.table useful for ggplot*

Description

For 2d rectangleGate, it is converted to a polygonGate first and then dispatch to the fortify method for polygonGate. for 1d, uses geom_vline/hline format.

Usage

```
## S3 method for class 'rectangleGate'
fortify(model, data = NULL, ...)
```

Arguments

<code>model</code>	rectangleGate
<code>data</code>	data range used for polygon interpolation.
<code>...</code>	not used.

Value

data.table

Examples

```
#2d rectangleGate
rect.g <- rectangleGate(list("FSC-H" = c(300,500), "SSC-H" = c(50,200)))
fortify(rect.g)
#1d gate
rg <- rectangleGate(list("FSC-H" = c(300,500)))
fortify(rg)
```

`fortify_fs`

Fortify a model into flowSet object

Description

The method provides a universe interface to convert a generic R object into a flowSet useful for ggcyto

Usage

```
fortify_fs(model, data, ...)

## S3 method for class 'flowSet'
fortify_fs(model, data, ...)

## Default S3 method:
fortify_fs(model, data, ...)
```

```
## S3 method for class 'flowFrame'
fortify_fs(model, data, ...)

## S3 method for class 'GatingSetList'
fortify_fs(model, data, ...)

## S3 method for class 'GatingSet'
fortify_fs(model, data, ...)
```

Arguments

model	flow object(flowFrame or GatingSet) to be converted to flowSet. when it is a GatingSet, it must contain the subset information stored as 'subset' attribute.
data	original dataset, if needed
...	other arguments passed to methods

Value

a flowSet/ncdfFlowSet object

Examples

```
data(GvHD)
fr <- GvHD[[1]]
fortify_fs(fr)

dataDir <- system.file("extdata", package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual", full = TRUE))
attr(gs, "subset") <- "CD4"
fortify_fs(gs)
```

geom_gate	<i>add a flowCore gate layer</i>
-----------	----------------------------------

Description

When 'data' is a gate (or flowCore filter) or a list of gates or a filterList object. When it is used directly with 'ggplot', pdata of the flow data must be supplied through 'pd' argument explicitly in order for the gates to be dispatched to each panel. However It is not necessary when used with 'ggcyto' wrapper since the latter will attach pData automatically.

Usage

```
geom_gate(data, ...)

## Default S3 method:
geom_gate(data, ...)

## S3 method for class 'list'
geom_gate(data, ...)
```

```

## S3 method for class 'filterList'
geom_gate(data, ...)

## S3 method for class 'polygonGate'
geom_gate(data, ...)

## S3 method for class 'rectangleGate'
geom_gate(data, ...)

## S3 method for class 'ellipsoidGate'
geom_gate(data, ...)

## S3 method for class 'character'
geom_gate(data, ...)

## S3 method for class 'filters'
geom_gate(data, ...)

## S3 method for class 'filtersList'
geom_gate(data, ...)

## S3 method for class 'logicalFilterResult'
geom_gate(data, ...)

## S3 method for class 'logical'
geom_gate(data, ...)

```

Arguments

data	a filter (Currently only rectangleGate (1d or 2d), polygonGate, ellipsoidGate are supported.) or a list of these gates or filterList or character specifying a gated cell population in the GatingSet
...	other arguments mapping, The mapping aesthetic mapping data a polygonGate fill polygonGate is not filled by default colour default is red pd pData (data.frame) that has rownames represents the sample names used as key to be merged with filterList

Details

When 'data' is a character, it construct an abstract geom layer for a character that represents nodes in a Gating tree and will be instantiated later as a specific geom_gate layer or layers based on the gates extracted from the given GatingSet object.

Value

a geom_gate layer

Examples

```

data(GvHD)
fs <- GvHD[subset(pData(GvHD), Patient %in%5:7 & Visit %in% c(5:6))["name"]]
p <- ggcyto(fs, aes(x = `FSC-H`, y = `SSC-H`))
p <- p + geom_hex(bins = 128)

```

```

rect.g <- rectangleGate(list("FSC-H" = c(300,500), "SSC-H" = c(50,200)))
#constructor for a list of filters
rect.gates <- sapply(sampleNames(fs), function(sn)rect.g)
p + geom_gate(rect.gates)

dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
p <- ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)
# add gate layer by gate name
p + geom_gate("CD4")

```

geom_hvline	<i>Vertical or horizontal line.</i>
-------------	-------------------------------------

Description

This geom is based on the source code of ' [geom_hline](#) and [geom_vline](#).

Usage

```
geom_hvline(mapping = NULL, data = NULL, position = "identity",
  show.legend = FALSE, ...)
```

Arguments

mapping	The aesthetic mapping, usually constructed with aes or aes_string . Only needs to be set at the layer level if you are overriding the plot defaults.
data	A layer specific dataset - only needed if you want to override the plot defaults.
position	The position adjustment to use for overlapping points on this layer
show.legend	should a legend be drawn? (defaults to FALSE)
...	other arguments passed on to layer . This can include aesthetics whose values you want to set, not map. See layer for more details.

Details

The goal is to determine the line to be either vertical or horizontal based on the 1-d data provided in this layer.

Value

a geom_hvline layer

Aesthetics

geom_vline understands the following aesthetics (required aesthetics are in bold):

- **xintercept**
- alpha
- colour
- group
- linetype
- size

Examples

```
p <- ggplot(mtcars, aes(x = wt, y = mpg)) + geom_point()
# vline
p + geom_hvline(data = data.frame(wt= 3))
# hline
p + geom_hvline(data = data.frame(mpg= 20))
```

geom_overlay

Overlay other populations on existing plots.

Description

It is useful for "backgating" plots.

Usage

```
geom_overlay(data, ...)

## Default S3 method:
geom_overlay(data, ...)

## S3 method for class 'character'
geom_overlay(data, ...)

## S3 method for class 'flowSet'
geom_overlay(data, ...)

## S3 method for class 'flowFrame'
geom_overlay(data, ...)
```

Arguments

data	a filter (Currently only rectangleGate (1d or 2d), polygonGate, ellipsoidGate are supported.) or a list of these gates or filterList or character specifying a gated cell population in the GatingSet
...	other arguments mapping, The mapping aesthetic mapping data a polygonGate fill polygonGate is not filled by default colour default is red pd pData (data.frame) that has rownames represents the sample names used as key to be merged with filterList

Value

a geom_overlay layer

Examples

```

library(ggcyto)
dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
p <- autoplot(gs, "CD3+")

# add a flowSet as the overlay
fs <- getData(gs, "DPT")
p + geom_overlay(data = fs, size = 0.3, alpha = 0.7)

# add overlay layer by gate name
p + geom_overlay(data = "DNT", size = 0.3, alpha = 0.7)

#add overlay for 1d densityplot
p <- ggcyto(gs, aes(x = CD4), subset = "CD3+") + geom_density(aes(y = ..count..))
p + geom_overlay("DNT", aes(y = ..count..), fill = "red")

```

geom_stats

*Population statistics layer***Description**

It is a virtual layer and will be instantiated as geom_label layer within ggcyto.+ operator.

Usage

```

geom_stats(gate = NULL, ..., value = NULL, type = "percent",
  data_range = NULL, adjust = 0.5, label.padding = unit(0.05, "lines"),
  label.size = 0)

```

Arguments

gate	a 'filterList' or character (represent as a population node in GatingSet) if not supplied, ggcyto then tries to parse the gate from the first geom_gate layer.
...	other arguments passed to geom_label layer
value	the pre-calculated stats value. when supplied, the stats computing is skipped.
type	can be "percent", "count" or "MFI".
data_range	the data range for each channels
adjust	adjust the position of the centroid. from 0 to 1.
label.padding, label.size	arguments passed to geom_label layer

Details

So it is dedicated for ggcyto context and thus can't not be added to ggplot object directly.

Value

a geom_popStats layer

Examples

```

dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
p <- ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)
p
# add gate and stats layer
p + geom_gate("CD4") + geom_stats()

```

getFlowFrame

extract flowFrame data structure from the given R object

Description

Mainly to get the channel and marker information.

Usage

```

getFlowFrame(x)

## S3 method for class 'flowSet'
getFlowFrame(x)

## S3 method for class 'ncdfFlowList'
getFlowFrame(x)

## S3 method for class 'GatingSetList'
getFlowFrame(x)

## S3 method for class 'GatingSet'
getFlowFrame(x)

## S3 method for class 'GatingHierarchy'
getFlowFrame(x)

```

Arguments

x flowSet or GatingSet/GatingHierarchy

Value

a flowFrame. When x is a ncdfFlowSet or GatingSet that is associated with ncdfFlowSet, the raw event data is not read and an empty flowFrame is returned.

Examples

```

data(GvHD)
fs <- GvHD[1:2]
getFlowFrame(fs)# fs is a flowSet

dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
getFlowFrame(gs)# gs is a GatingSet

```

ggcyto.flowSet *Create a new ggcyto plot from a flowSet*

Description

Create a new ggcyto plot from a flowSet

Usage

```
## S3 method for class 'flowSet'
ggcyto(data, mapping, filter = NULL, ...)

## S3 method for class 'ncdfFlowList'
ggcyto(data, ...)
```

Arguments

data	default flowSet for plot
mapping	default list of aesthetic mappings (these can be colour, size, shape, line type – see individual geom functions for more details)
filter	a flowcore gate object or a function that takes flowSet and channels as input and returns a data-dependent flowcore gate The gate is used to filter the flow data before it is plotted.
...	ignored

Value

a ggcyto_GatingSet object which is a subclass of ggcyto class.

Examples

```
data(GvHD)
fs <- GvHD[subset(pData(GvHD), Patient %in% 5:7 & Visit %in% c(5:6))["name"]]
# 1d histogram/densityplot
p <- ggcyto(fs, aes(x = `FSC-H`))
#facet_wrap(~name)` is used automatically
p1 <- p + geom_histogram()
p1
#overwriting the default faceeting
p1 + facet_grid(Patient~Visit)

#display density
p + geom_density()

# 2d scatter/dot plot
p <- ggcyto(fs, aes(x = `FSC-H`, y = `SSC-H`))
p <- p + geom_hex(bins = 128)
p
```

ggcyto.GatingSet	<i>Create a new ggcyto plot from a GatingSet</i>
------------------	--

Description

Create a new ggcyto plot from a GatingSet

Usage

```
## S3 method for class 'GatingSet'
ggcyto(data, mapping, subset = "_parent_", ...)

## S3 method for class 'GatingSetList'
ggcyto(data, ...)

## S3 method for class 'GatingHierarchy'
ggcyto(data, ...)
```

Arguments

data	GatingSet to plot
mapping	default list of aesthetic mappings (these can be colour, size, shape, line type – see individual geom functions for more details)
subset	character that specifies the node path or node name in the GatingSet. Default is "_parent_", which will be substitute with the actual node name based on the geom_gate layer to be added later.
...	ignored

Value

a ggcyto_GatingSet object which is a subclass of ggcyto_flowSet class.

Examples

```
dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
# 2d plot
ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)

# 1d plot
ggcyto(gs, aes(x = CD4), subset = "CD3+") + geom_density()
```

ggcyto_arrange	<i>Arrange a list of ggplot objects into gtable</i>
----------------	---

Description

It is usually implicitly invoked by print and show method and can be called by user when the further manipulation is needed,

Usage

```
ggcyto_arrange(x, ...)
```

Arguments

x	ggcyto_gate_layout, which is essentially a list of ggplot objects that were previously stored as ggcyto_gate_layout object by autoplot function.
...	other arguments passed to arrangeGrob

Value

gtable

Examples

```
## Not run:
# get ggcyto_GatingLayout object from first sample
res <- autoplot(gs[[1]], nodes, bins = 64)
class(res)
# arrange it as one-row gtable object
gt <- ggcyto_arrange(res, nrow = 1)
gt
# do the same to the second sample
gt2 <- ggcyto_arrange(autoplot(gs[[2]], nodes, bins = 64), nrow = 1)
# combine the two and print it on the same page
gt3 <- gridExtra::rbind.gtable(gt, gt2)
plot(gt3)

## End(Not run)
```

ggcyto_par_default	<i>Return The default ggcyto settings</i>
--------------------	---

Description

Return The default ggcyto settings

Usage

```
ggcyto_par_default()
```

Value

a list of default settings for ggcyto

Examples

```
ggcyto_par_default()
```

ggcyto_par_set	<i>Set some default parameters for ggcyto</i>
----------------	---

Description

Use this function to modify ggcyto parameters These are the regular (or to be instantiated as) scales, labs, facet objects. They can be added as a single layer to the plot for the convenience.

Usage

```
ggcyto_par_set(...)
```

Arguments

... a list of element name, element pairings that modify the existing parameter settings

Value

a list of new settings for ggcyto

elements

The individual elements are:

limits	can be "data"(default) or "instrument" or a list of numeric limits for x and y (e.g. list(x = c(0, 4000)))
facet	the regular facet object
hex_fill	default scale_fill_gradientn for geom_hex layer
lab	labs_cyto object

Examples

```
library(ggcyto)
dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))

p <- ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+")
# 2d plot
p <- p + geom_hex(bins = 64)
p

#use instrument range by overwriting the default limits settings
p + ggcyto_par_set(limits = "instrument")

#manually set limits
myPars <- ggcyto_par_set(limits = list(x = c(0,3.2e3), y = c(-10, 3.5e3)))
```

```
p + myPars# or xlim(0,3.2e3) + ylim(-10, 3.5e3)
```

is.ggcyto *Reports whether x is a ggcyto object*

Description

Reports whether x is a ggcyto object

Usage

```
is.ggcyto(x)
```

Arguments

x An object to test

Value

TRUE/FALSE

Examples

```
data(GvHD)
fs <- GvHD[1:2]
p <- ggcyto(fs, aes(x = `FSC-H`))
is.ggcyto(p)
```

is.ggcyto_flowSet *Reports whether x is a ggcyto_flowSet object*

Description

Reports whether x is a ggcyto_flowSet object

Usage

```
is.ggcyto_flowSet(x)
```

Arguments

x An object to test

Value

TRUE or FALSE

Examples

```
data(GvHD)
fs <- GvHD[1:2]
p <- ggcyto(fs, aes(x = `FSC-H`))
is.ggcyto_flowSet(p)
```

<code>is.ggcyto_par</code>	<i>Reports whether x is a ggcyto_par object</i>
----------------------------	---

Description

Reports whether x is a ggcyto_par object

Usage

```
is.ggcyto_par(x)
```

Arguments

x	An object to test
---	-------------------

Value

TRUE or FALSE

Examples

```
myPar <- ggcyto_par_set(limits = "instrument")
is.ggcyto_par(myPar)
```

<code>labs_cyto</code>	<i>Change axis labels and legend titles</i>
------------------------	---

Description

The actual labels text will be instantiated when it is added to ggcyto plot.

Usage

```
labs_cyto(labels = "both")
```

Arguments

labels	default labels for x, y axis. Can be "channel" , "marker", or "both" (default)
--------	--

Value

a list

Examples

```

dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))

# default is "both"
p <- ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)
p

#use marker name as x,y labs
p + labs_cyto("marker")

#use channel name as x,y labs
p + labs_cyto("channel")

```

marginalFilter	<i>Generate a marginal gate.</i>
----------------	----------------------------------

Description

It simply constructs an `boundaryFilter` that removes the marginal events. It can be passed directly to `ggcyto` constructor. See the examples for details.

Usage

```
marginalFilter(fs, dims, ...)
```

Arguments

<code>fs</code>	flowSet (not used.)
<code>dims</code>	the channels involved
<code>...</code>	arguments passed to boundaryFilter

Value

an `boundaryFilter`

Examples

```

data(GvHD)
fs <- GvHD[1]
chnls <- c("FSC-H", "SSC-H")
#before removign marginal events
summary(fs[, chnls])

# create marginal filter
g <- marginalFilter(fs, chnls)
g

#after remove marginal events
fs.clean <- Subset(fs, g)
summary(fs.clean[, chnls])

```

```
#pass the function directly to ggcyto
dataDir <- system.file("extdata",package="flowWorkspaceData")
gs <- load_gs(list.files(dataDir, pattern = "gs_manual",full = TRUE))
# with marginal events
ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+") + geom_hex(bins = 64)

# using marginalFilter to remove these events
ggcyto(gs, aes(x = CD4, y = CD8), subset = "CD3+", filter = marginalFilter) + geom_hex(bins = 64)
```

```
print.ggcyto
```

```
Draw ggcyto on current graphics device.
```

Description

A wrapper for print.ggplot. It converts the ggcyto to conventional ggplot object before printing it. This is usually invoked automatically when a ggcyto object is returned to R console.

Usage

```
## S3 method for class 'ggcyto'
print(x, ...)

## S3 method for class 'ggcyto'
plot(x, ...)

## S4 method for signature 'ggcyto'
print(x, ...)

## S3 method for class 'ggcyto'
show(object)

## S4 method for signature 'ggcyto'
show(object)
```

Arguments

x	ggcyto object to display
...	other arguments not used by this method
object	ggcyto object

Value

nothing

```
print.ggcyto_GatingLayout
      print method for ggcyto_gate_layout class
```

Description

print method for ggcyto_gate_layout class

Usage

```
## S3 method for class 'ggcyto_GatingLayout'
print(x, ...)

## S3 method for class 'ggcyto_GatingLayout'
show(object)

## S4 method for signature 'ggcyto_GatingLayout'
show(object)
```

Arguments

x	ggcyto_gate_layout, which is essentially a list of ggplot objects that were previously stored as ggcyto_gate_layout object by autoplot function.
...	other arguments passed to arrangeGrob
object	ggcyto_GatingLayout

Value

nothing

```
scale_x_flowJo_biexp flowJo biexponential scale
```

Description

flowJo biexponential scale

Usage

```
scale_x_flowJo_biexp(..., maxValue = 262144, widthBasis = -10, pos = 4.5,
  neg = 0, equal.space = FALSE)

scale_y_flowJo_biexp(..., maxValue = 262144, widthBasis = -10, pos = 4.5,
  neg = 0, equal.space = FALSE)
```

Arguments

... common continuous scale parameters passed to 'continuous_scale' (not used currently)

maxValue, widthBasis, pos, neg see 'help(flowJoTrans')

equal.space whether to display the breaks in equal.space format

Value

ScaleContinuous object

Examples

```
data(GvHD)
fr <- GvHD[[1]]
p <- ggcyto(fr, aes(x = `FL1-H`)) + geom_density()
#display at raw scale
p
#display at transformed scale
p + scale_x_flowJo_biexp(maxValue = 1e4, widthBasis = 0)
```

scale_x_flowJo_fasinh *flowJo inverse hyperbolic sine scale*

Description

flowJo inverse hyperbolic sine scale

Usage

```
scale_x_flowJo_fasinh(..., m = 4, t = 1200)

scale_y_flowJo_fasinh(..., m = 4, t = 1200)
```

Arguments

... common continuous scale parameters passed to 'continuous_scale' (not used currently)

m, t see 'help(flowJo.fasinh')

Value

ScaleContinuous object

Examples

```
data(GvHD)
fr <- GvHD[[1]]
p <- ggcyto(fr, aes(x = `FL1-H`)) + geom_density()
#display at raw scale
p
#display at transformed scale
p + scale_x_flowJo_fasinh(t = 1e4)
```

scale_x_logicle	<i>flowJo inverse hyperbolic sine scale</i>
-----------------	---

Description

flowJo inverse hyperbolic sine scale

Usage

```
scale_x_logicle(..., w = 0.5, t = 262144, m = 4.5, a = 0)
```

```
scale_y_logicle(..., w = 0.5, t = 262144, m = 4.5, a = 0)
```

Arguments

... common continuous scale parameters passed to 'continuous_scale' (not used currently)

w, t, m, a see 'help(logicleTransform)'

Value

ScaleContinuous object

Examples

```
data(GvHD)
fr <- GvHD[[1]]
p <- ggcyto(fr, aes(x = `FL1-H`)) + geom_density()
#display at raw scale
p
#display at transformed scale
p + scale_x_logicle(t = 1e4)
```

stat_position	<i>compute the positions of the population statistics based on the geometric gate centroid</i>
---------------	--

Description

It is usually not called directly by user but mainly used by compute_stats function (which is called by ggcyto add method when geom_states layer is added).

Usage

```
stat_position(gate, ...)
```

```
## S3 method for class 'filter'
stat_position(gate, ...)
```

```
## S3 method for class 'filterList'
```

```
stat_position(gate, ...)  
  
## S3 method for class 'list'  
stat_position(gate, ...)
```

Arguments

gate	a flowCore filter
...	other arguments adjust adjust the position of the centroid
	abs logical
	data_range the actual data range

Value

a data.table
the gate centroid coordinates

Examples

```
data(GvHD)  
fs <- GvHD[1:4]  
rect.g <- rectangleGate(list("FSC-H" = c(300,500), "SSC-H" = c(50,200)))  
rect.gates <- sapply(sampleNames(fs), function(sn)rect.g)  
stat_position(rect.gates)
```
